What does it mean to be Green?

Building with more environmentally useful products increases efficiency and reduces the negative impact we have on the world we live in. A lot of emphasis has been put on being green or environmentally friendly, so we all look for ways to conserve, replenish and otherwise help the environment we live in. Allan Block has been building green for over 20 years and is poised up to bring more green solutions to the table.

New Eco-Friendly Retaining Wall - AB Fieldstone®
The new innovation in retaining walls, AB Fieldstone is Green, Natural, and User-Friendly.

Make Your Neighbors Green with Eazy.
The two piece block system - the facing unit and the anchoring unit, allow the use of recycled materials in each assembly without sacrificing the beauty, this appearance of the facing unit. AB Fieldstone anchoring units are always buried, so using a higher percentage of locally recycled materials in the anchoring unit will never affect the appearance of the wall. Green Naturally Unique.

AB Fieldstone has the visual elements of natural stone, bringing the strong character of the world's mountains to man-made retaining walls. Natural Friendly All Around.

Because the system is a multi-piece assembly, the blocks are lighter. These ergonomically-friendly blocks are easy to lift from a pallet and carry across difficult jobsites. Using the same practices as other Allan Block retaining wall products, AB Fieldstone is easy to install. User-Friendly.

Finding the Right Contractor

With so much at stake, it’s important to spend the time to find the right contractor. Here are some tips to get you started:

1. **Check out the contractor’s reputation**: Look for reviews and testimonials from previous clients.
2. **Verify insurance and licenses**: Contractors should be licensed and insured to protect you from any potential liability.
3. **Get references**: Ask for references and check them.
4. **Estimate**: Get multiple estimates to compare costs and quality.
5. **Contract**: Make sure the contract is clear and includes all details of the project.

End goal: Find a contractor you can trust to deliver a quality project.

Be an Expert

To be successful in the landscape industry, you need to be an expert. Here are some tips to become one:

1. **Stay informed**: Keep up with the latest trends and technologies in the industry.
2. **Network**: Attend industry events and connect with other professionals.
3. **Train**: Consider taking courses or workshops to enhance your skills.
4. **Be a resource**: Share your knowledge and expertise with your clients and colleagues.

End goal: Be recognized as an expert in your field.

Hire or Be Hired: Tips for Retaining Wall Contractors

In today’s market, being able to deliver a high-quality product is not enough. You also need to be able to attract and retain customers. Here are some tips to help you:

1. **Offer a personal touch**: Get to know your customers and their needs.
2. **Communicate effectively**: Keep your customers informed throughout the project.
3. **Deliver on time and on budget**: This is crucial to maintaining customer satisfaction.
4. **Follow up**: Check in with your customers after the project is complete.

End goal: Build a strong relationship with your customers.

Beautiful Places to Play

When choosing a landscape contractor, consider the following:

1. **Experience**: Look for a contractor with a proven track record.
2. **Portfolio**: Ask to see examples of their work.
3. **Communication**: Make sure the contractor is easy to communicate with.
4. **Cost**: Compare costs from different contractors.

End goal: Find the right contractor for your project.

Finding the Right Contractor

What’s the no-brainer that you will choose the “perfect” contractor to build your wall or patio project, there are some guidelines you can follow that will increase your chances of finding the right one for your landscape project.

Check out our website. First, because a contractor tells you they are an expert in retaining wall construction doesn’t make it so. Choose a contractor that has had proper training on how to install the products you are using. A great way to do this is to choose a contractor who has been trained and certified to build quality walls. Ask the contractor if they are an ABC Certified Contractor.

Chop up the bill. Don’t go with a contractor just because their bid came in the lowest. Liberty contractors, contractors who bid significantly lower than the contract will often cut corners or increase their profit margins. The low bid results in your installation, vision, installations, and the contractor who is going to be building your project. If you don’t get the project you want, then call the insurance company and verify coverage. Contractors without insurance often offer prices that are very low prices, but be careful. You could end up with a contractor who is not able to perform the service you are looking for.

Get it in writing. Ask to see a copy of the contractor’s portfolio and references. Not all contractors have the same skills. These are the skills you can reference to your future projects.

Negative amenities. Ask to see a list of a contractor’s past projects and references. From the job cap -
With their new house perched atop a beautiful hill with sweeping views of the California countryside, their backyard was truly an eye-opener for these homeowners. These homeowners were definitely in need of a retaining wall. After some research on different types of products, the homeowners realized the job was going to take more than a Do-It-Yourselfer could handle. What they needed was a contractor, but where to begin looking? With so many different types of landscape contractors out there, how do you choose the right one for your landscape project? In today’s market, being a contractor that builds excellent walls is not always enough to get the projects coming in and the customers asking for you. A tremendous amount of contractors are at great risk of going broke because of the economy. How do you stand out from the rest? How do you become the “right contractor” for a potential customer? Here are some simple steps to make sure you are the contractor the customer is looking for.

Finding the Right Contractor

What’s to say that you will choose the “perfect” contractor to build your wall or patio project, there are some guidelines you can follow that will increase your chances of finding the right one for your landscape project.

Check our references. First, because a contractor tells you they are an expert in retaining wall construction doesn’t make it so. Choose a contractor that has been in business long enough to have installed projects you can see or ask for pictures. A great way to do this is to choose a contractor who has been trained and certified to build quality walls. Ask the contractor if they are an ABC Certified Contractor.

Choose not cheaper. Don’t go with a contractor just because their bid seems to be the lowest. Bids are generally lower to increase their profit margins. The contractor may be placing bids to increase their profit margins. You could end up with a moldy landscape or a wall that needs to be replaced.

Get it in writing. Make sure that the details of your project are outlined in a contract that you and the contractor sign. If the scope of work changes while the project is in progress, you need to have a contract that specifies any changes.

Insurance matters. Ask to see a copy of the contractor’s general liability certificates. Call the insurance company and verify coverage. Contractors without insurance should be avoided. As the work is being done, you are financially responsible for any property damage or personal injury to workers. Get it in writing.

Hire or Be Hired: Tips for Retaining Wall Contractors

In today’s market, becoming a contractor that builds excellent walls is not always enough to get the projects coming in and the customers asking for you. A tremendous amount of contractors are at great risk of going broke because of the economy. How do you stand out from the rest? How do you become the “right contractor” for a potential customer? Here are some simple steps to make sure you are the contractor the customer is looking for.

To be an expert, potential contractors need to know that you and your whole staff are qualified to do the job. So how do you ensure that your company is the one that potential customers will want to work with? The key is to design and market the products you understand and that will solve the client’s problems. Position yourself as the expert by having the training and the practical knowledge you need to succeed. In short, if you are not already an ABC Certified Contractor – become one.

To be visible, have a portfolio with current projects and photos and references. All other companies in the wall business have examples of their past work which can be either water or clay walls and clay block. Take a look at your portfolio and have a list of projects that you have done in the past. This is just as important as the current project. If you have a portfolio of your work and you want to take it to the next level, you need to show your past work to the potential customer.

To be honest, contractors must be able to communicate with their clients and to fully understand the project. Contractors must also address the customer’s needs and be able to provide a professional estimate. Contractors should be able to take the time to explain the project and to educate the customer on the process. Contractors should also be able to provide a professional estimate.

To be reputable, contractors must have a good reputation in the community. Contractors must also be able to provide a professional estimate. Contractors should be able to take the time to explain the project and to educate the customer on the process. Contractors should also be able to provide a professional estimate.

To be successful, contractors must be able to communicate with their clients and to fully understand the project. Contractors must also address the customer’s needs and be able to provide a professional estimate. Contractors should be able to take the time to explain the project and to educate the customer on the process. Contractors should also be able to provide a professional estimate.
